### Professional Summary

Senior IT Project Manager with 10+ years of experience leading infrastructure, Data Engineer and Data Analyst with over 6 years of experience cloud, and data-driven initiatives. Proven track record managing end-to-end cloud migrations, data warehouses, and mission-critical database environments. Specialized in Snowflake administration, security (RBAC), performance optimization, cost control, and ETL/ELT architectures. Strong background in Oracle, cloud infrastructure (AWS, Azure, OCI), data pipelines with airbyte and dbt labs, and analytics platforms, supporting high-volume business-critical workloads for finance, HR, marketing, and operations.

### Work Experience

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Details of responsibilities | <p>I led the comprehensive design and mapping of data architecture, including models, business rules, storage, and data and AI governance guidelines.</p> <p>I ensured the quality, availability, and reliability of the data used for decision-making, advanced analytics, and internal and external reporting.</p> <p>I collaborated closely with architecture, engineering, and analytics teams to support the organization's data and artificial intelligence strategy. I led the delivery of data governance for each project, ensuring standards, format validations, and alignment with best practices.</p> <p>I managed and maintained the corporate catalog of data and AI models, facilitating the traceability, discovery, and reuse of data assets.</p> <p>I worked in cloud environments (AWS/Azure/GCP) managing, storing, and processing data on a scale. I participated in IT project management, coordinating stakeholders, priorities, and data-related deliverables. Administered Snowflake environments across DEV, QA, and PROD, managing users, roles, RBAC, warehouses, databases, and schemas.</p> |

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                       | <p>Designed and enforced security and data access policies aligned with governance and compliance standards.</p> <p>Tuned complex SQL queries, significantly improving execution times and warehouse efficiency. Managed data ingestion, CRM platforms, and cloud storage into Snowflake. Built and maintained dbt models to transform raw data into analytics-ready datasets for marketing and customer insights.</p> <p>I supported BI and analytics teams by delivering optimized views and data marts. Automated Snowflake administrative tasks using Python and SQL, SSIS to develop ETL, SSRS to develop reports and connecting with Power BI.</p> <p>I can program models in using dbt labs and airbyte to extract data from databases such as raw and many other data bases conections.</p> |

| <b>Details of responsibilities</b> | <p>Development of ETL processes, Oracle and MS SERVER database migration project to the Vertica platform, Creation of views, tables, databases in PSQL, stored procedures.</p> <p>I developed Power BI dashboards and reports for several areas like Human Resources, Finance, inventory products and stores.</p> <p>I cleaned up databases in Excel and used Python before loading them into database tables. Azure and Amazon RDS for MySQL, PostgreSQL, and SQL Server.</p> <p>Led database migration projects from Oracle and SQL Server into modern cloud analytics platforms including Snowflake and Vertica.</p> <p>Designed ETL pipelines loading data from Azure, Amazon RDS, and on-premise systems into Snowflake.</p> <p>Created and maintained Snowflake databases, schemas, tables, and views supporting reporting and analytics.</p> <p>Optimized SQL workloads and ensured data quality and pipeline reliability.</p> <p>Built Power BI dashboards connected to Snowflake for Finance, HR, Inventory, and Sales.</p> <p>Managed and administered large-scale Oracle Database environments, ensuring high availability, performance, and security.</p> <p>Extensive experience with Oracle RAC clusters in mission-critical environments.</p> <p>Designed and executed backup, recovery, cloning, and migration strategies using RMAN and Data Pump.</p> <p>Implemented and maintained Disaster Recovery solutions (DRP) using Oracle Data Guard.</p> |

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | <p>Hands-on experience with replication technologies such as Oracle GoldenGate and Data Guard.</p> <p>Strong expertise in Linux (Red Hat Enterprise Linux) administration and troubleshooting.</p> <p>Monitored database performance and system health using tools such as Nagios, Oracle Enterprise Manager (OEM), Dynatrace, SiteScope, and Prometheus.</p> <p>Developed automation scripts using Python, Java, and PowerShell to improve operational efficiency.</p> <p>Experience implementing CI/CD practices using tools like Ansible and AWX for database and infrastructure automation.</p> <p>Exposure to AWS cloud environments, supporting hybrid and cloud-based database architectures.</p> <p>I can program models in using dbt labs and airbyte to extract data from databases such as raw and many other data bases conections.</p> |
| <b>Software Tools</b> | <p>Oracle SQL Developer, PL/SQL, Jasper Reports, Oracle Forms, Oracle OVM, Databricks, Oracle EBS, SPARH, Linux, Amazon Machine Learning.</p> <p>Oracle versions (10g, 11g, 12c, 19c), Snowflake.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Achievements</b>   | <p>Apply my knowledge in databases for the database migration project required by the client.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Details of responsibilities</b> | <p>I was in charge to give maintenance of databases in Oracle, Forms, OVM servers, and the development of reports in PL/SQL for the areas of Human Resources, Accounting, Finance, Payroll, School Control. Oracle Database Server Administration, DBMS</p> <p>I implemented and developed ETL processes for various areas such as sales, human resources, and accounting.</p> <p>I helped to improve the processes in the Human Resources area.</p> <p>I developed Power BI dashboards and reports connected to oracle data bases and MySql.</p> <p>I collaborated with development team in the migration of databases for the SPARH payroll system, which was hosted as a client-server and subsequently migrated to a web server.</p> <p>I developed database backups and managed automated processes with scheduled jobs and i developed store procedures.</p> <p>I collaborated with development team to develop a time-entry registration system for the staff. I developed ETL to send information to the payroll system. This system only captured fingerprints and facial expressions to capture staff time-entry and time-out records</p> <p>I worked on human resources team to improve and automate processes such as:</p> <p>Payroll on time validations, holidays, vacations, health incidents, and many other human resources processes, contracts agreement staff.</p> <p>I worked with Ensure Governance, Security, and Scalability</p> <p>Implementation and maintenance of data governance policies to ensure quality, security, and accessibility.</p> <p>Collaboration with cross-functional teams (IT, compliance, finance) to improve data management processes.</p> <p>I participated in the maintenance of the Java-based student information portals and the jQuery-based payroll system portals.</p> <p>Advanced administration of Oracle Database 12c and 19c in mission-critical OLTP and DSS environments.</p> <p>Modeling and Architecture</p> <p>Design of Star Schema, Snowflake Schema, and Data Vault data models for analytics and reporting.</p> <p>Implementation of Data Warehouses and Data Marts on Snowflake.</p> <p>Separation of RAW, STAGING, CORE, and ANALYTICS layers.</p> <p>Use of schemas and databases for DEV, QA, and PROD environments.</p> <p>Data Ingestion and Loading</p> <p>Data loading from:</p> <p>S3, Azure Blob, Google Cloud Storage</p> <p>Relational databases (Oracle, SQL Server, MySQL)</p> <p>APIs and CSV, JSON, BSON</p> <p>SQL in Snowflake</p> |

## Courses and Diplomas

| Course name                                              | Certificate<br>YES / NO. |
|----------------------------------------------------------|--------------------------|
| Automated ML Apple & Google                              | YES                      |
| Administración de Base de Datos Oracle                   | YES                      |
| Oracle Certified Foundation Associate                    | YES                      |
| Scrum Fundamentals for Scrum Master and Agile Projects   | YES                      |
| Escuela Ciencia de Datos UNAM                            | YES                      |
| Coursera Learner Proceso de datos Sucios a Datos limpios | YES                      |
| Statistics for Business Analytics using MS Excel         | YES                      |

## Idioms

| Idioms | 1. English | 2.Spanish | 3. | 4. | 5. |
|--------|------------|-----------|----|----|----|
| Level  | B2         | Native    |    |    |    |

## Technical knowledge

| Frontend programming languages                           | Years       | Level    |
|----------------------------------------------------------|-------------|----------|
| Javascript, Django, Html                                 | 2           | Advanced |
|                                                          |             |          |
|                                                          | Years       | Level    |
| Oracle Cloud, Amazon RDS, Azure                          | 6           | Advanced |
|                                                          |             |          |
| Tools / Frameworks                                       | Years       | Level    |
| AutoML, Create ML                                        | 1           | Advanced |
|                                                          |             |          |
| Environments / Mobile environments                       | Years       | Level    |
| Odoo ERP versions 6 a 13,                                | 1           | Advanced |
|                                                          |             |          |
| Operating systems                                        | Years       | Level    |
| Windows, Linux, OSX, UNIX                                | 10          | Advanced |
|                                                          |             |          |
| Bases de Datos                                           | Años de uso | Level    |
| Oracle, MS Sql Server, Postgresql, Databricks, Snowflake | 6           | Advanced |
|                                                          |             |          |
| Metodologías                                             | Años de uso | Level    |
| ITIL, AGILE, SCRUM                                       | 6           | Advanced |
|                                                          |             |          |

## Core Skills

- Proven skills with SQL, Python, Java and related frameworks.
- Experience in data science or data engineering
- Databases: advanced handling of SQL and NoSQL databases (PostgreSQL, MongoDB, Redis)
- Machine Learning Ops (MLOps)
- Mastery of TensorFlow, PyTorch, and Scikitlearn
- Machine learning tools and frameworks
- Processing large volumes of data. Hands-on experience with Spark and Pandas for ETL and analytics
- Use of tools such as Power BI, Tableau and AI tools.
- Microservices development and Microservices integration using Python and Docker Kubernetes containers
- Time series and statistical modeling
- Knowledge of Kafka and its integration with data flows
- Architecture and data modeling skills required to ship products using industry-standard data and cloud technologies AWS Glue, Apache Airflow, Databricks, and Azure Data Factory.
- Snowflake Administration (RBAC, Warehouses, Cost Control, Security)
- SQL Performance Tuning & Query Optimization dbt (models, tests, transformations)

- ELT & Data Pipelines
- Data Warehousing & Data Modeling
- Python (automation, scripting, Snowflake integration)
- Cloud Platforms (AWS, Azure, OCI, GCP)
- Oracle, PostgreSQL, SQL Server
- Power BI, Databricks
- DevOps & Automation
- SSIS, SSAS, SSRS
