

Pedro Miguel Jiménez Martínez

Position to apply

Tools and Automation, Quality Assurance, Services Engineering, Data Analyst

Full Name	Pedro Miguel Jiménez Martínez	Portfolio	https://github.com/pieroel/Miguel-Jimenez-Data-Engineer-Portfolio
Email / Cell number	+525561208617	Linkedin	www.linkedin.com/in/pedrojime nezmartinez
Work	Mixed	Availability to travel	YES

Professional Summary

Data Engineer and Data Analyst with over 6 years of experience in enterprise data platforms, cloud data warehouses, and mission-critical database environments. Specialized in Snowflake administration, security (RBAC), performance optimization, cost control, and ELT architectures. Strong background in Oracle, cloud infrastructure (AWS, Azure, OCI), data pipelines, and analytics platforms, supporting high-volume business-critical workloads for finance, HR, marketing, and operations.

Work Experience

Company	ECD
Start Date	26-07-2024
End Date	26-03-2025
Position	Data Engineer Specialist
Area	Information Technology
Details of responsibilities	I led the comprehensive design and mapping of the data architecture, including models, business rules, storage, and data and AI governance guidelines. I ensured the quality, availability, and reliability of the data used for decision-making, advanced analytics, and internal and external reporting. I implemented and oversaw data governance policies in the corporate BI and data marketplace, guaranteeing regulatory compliance and responsible use of information. I coordinated the management of data and AI model risks, including monitoring machine learning models and quality controls. I collaborated closely with architecture, engineering, and analytics teams to support the organization's data and artificial intelligence strategy. I led the delivery of data governance for each project, ensuring standards, format validations, and alignment with best practices. I managed and maintained the corporate catalog of data and AI models, facilitating the traceability, discovery, and reuse of data assets. I worked in cloud environments (AWS/Azure/GCP) managing, storing, and processing data on a scale. I participated in IT project management, coordinating stakeholders, priorities, and data-related deliverables. Administered Snowflake

	environments across DEV, QA, and PROD, managing users, roles, RBAC, warehouses, databases, and schemas. Designed and enforced security and data access policies aligned with governance and compliance standards. Monitored and optimized warehouse usage, query performance, and credit consumption using Snowflake ACCOUNT_USAGE and QUERY_HISTORY. Tuned complex SQL queries, significantly improving execution times and warehouse efficiency. Managed data ingestion, CRM platforms, and cloud storage into Snowflake. Built and maintained dbt models to transform raw data into analytics-ready datasets for marketing and customer insights. Supported BI and analytics teams by delivering optimized views and data marts. Automated Snowflake administrative tasks using Python and SQL.
Software Tools	Oracle SQL Developer, PL/SQL, Jasper Reports, Oracle Forms, Oracle OVM, Databricks, Oracle EBS, SPARH, Linux, Amazon Machine Learning. Oracle versions (10g, 11g, 12c, 19c)
Achievements	Apply my knowledge in databases for the database migration project required by the client.
Contact	
Reason of exit	Project with the client lasting nine months

Company	GRUPO QUALTOP
Start Date	08-19-2022
End Date	04-18-2023
Position	Data Engineer Specialist
Area	Information Technology
Details of responsibilities	Development of ETL processes, Oracle and MS SERVER database migration project to the Vertica platform, Creation of views, tables, databases in PSQL, stored procedures. I developed Power BI dashboards and reports for several areas like Human Resources, Finance, inventory products and stores. I cleaned up databases in Excel and used Python before loading them into database tables. Azure and Amazon RDS for MySQL, PostgreSQL, and SQL Server. Led database migration projects from Oracle and SQL Server into modern cloud analytics platforms including Snowflake and Vertica. Designed ELT pipelines loading data from Azure, Amazon RDS, and on-premise systems into Snowflake. Created and maintained Snowflake databases, schemas, tables, and views supporting reporting and analytics. Optimized SQL workloads and ensured data quality and pipeline reliability. Built Power BI dashboards connected to Snowflake for Finance, HR, Inventory, and Sales.
Software Tools	Oracle SQL Developer, PL/SQL, Jasper Reports, Oracle Forms, Oracle OVM, Databricks, Oracle EBS, SPARH, Linux, Amazon Machine Learning. Oracle versions (10g, 11g, 12c, 19c), Snowflake.
Achievements	Apply my knowledge in databases for the database migration project required by the client.

Reason of exit	Project with the client lasting seven months

Company	CENTRO UNIVERSITARIO UTEG
Start Date	11-16-2017
End Date	07-28-2022
Position	Data Engineer Specialist
Area	Information Technology
Details of responsibilities	I was in charge to give maintenance of databases in Oracle, Forms, OVM servers, and the development of reports in PL/SQL for the areas of Human Resources, Accounting, Finance, Payroll, School Control. Oracle Database Server Administration, DBMS I implemented and developed ETL processes for various areas such as sales, human resources, and accounting. I helped to improve the processes in the Human Resources area. I developed Power BI dashboards and reports connected to oracle data bases and MySql. I collaborated with development team in the migration of databases for the SPARH payroll system, which was hosted as a client-server and subsequently migrated to a web server. I developed database backups and managed automated processes with scheduled jobs and i developed store procedures. I collaborated with development team to develop a time-entry registration system for the staff. I developed ETL to send information to the payroll system. This system only captured fingerprints and facial expressions to capture staff time-entry and time-out records I worked on human resources team to improve and automate processes such as: Payroll on time validations, holidays, vacations, health incidents, and many other human resources processes, contracts agreement staff. I worked with Ensure Governance, Security, and Scalability • Data Catalog: Use OCI Data Catalog or integrate with Apache Atlas. • Security: Use OCI IAM, Vault, and WAF. • Scaling: Use Auto-scaling with OKE or serverless options like Data Flow. • Networking: Architect using VCNs, Private Endpoints, and FastConnect for hybrid cloud use. Implementation and maintenance of data governance policies to ensure quality, security, and accessibility. Collaboration with cross-functional teams (IT, compliance, finance) to improve data management processes. I participated in the maintenance of the Java-based student information portals and the jQuery-based payroll system portals. Advanced administration of Oracle Database 12c and 19c in mission-critical OLTP and DSS environments. Modeling and Architecture Design of Star Schema, Snowflake Schema, and Data Vault data models for analytics and reporting. Implementation of Data Warehouses and Data Marts on Snowflake. Separation of RAW, STAGING, CORE, and ANALYTICS layers. Use of schemas and databases for DEV, QA, and PROD environments. Data Ingestion and Loading Data loading from: S3, Azure Blob, Google Cloud Storage Relational databases (Oracle, SQL Server, MySQL) APIs and CSV, JSON, BSON Using:

	COPY INTO External and Internal Stages Snowpipe for continuous (near real-time) loading Integration with ETL/ELT tools such as: Airflow, Fivetran, dbt, Talend, and Matillion Transformation and Processing Developing ELT pipelines using: SQL in Snowflake Streams and Tasks for incremental processing dbt for versioned transformation Handling: Deduplication Slowly Changing Dimensions (SCD Type 1 & 2) Data validation and quality assurance
Software Tools	Oracle SQL Developer, PL/SQL, Jasper Reports, Oracle Forms, Oracle OVM, Databricks, Oracle EBS, SPARH, Linux, Amazon Machine Learning. Oracle versions (10g, 11g, 12c, 19c), Java, Javascript, Snowflake.
Achievements	Apply my knowledge in databases for the database migration project required by the client, Configuring database connections, data cleaning processes.
Contact	Israel Omar Vargas Castro phone: +52 1 33 1078 8000 email: oficial@uteg.edu.mx
Reason of exit	Change of residence from Guadalajara to Mexico City

Company	DINETSYS
Start Date	01-15-2016
End Date	11-17-2017
Position	Data Transformation Specialist
Area	Information Technology
Details of responsibilities	I implemented Odoo ERP, installation of virtual machines on linux servers, programming and configuration of modules and submodules in Python, database administration in Postresql, database migration. I performed a database migration due to an ERP version change from version 6 to version 10. I migrated databases that were in PostreSQL from a physical server to a virtual server with Linux and WMware. I developed database backups and managed automated processes with scheduled jobs and i developed store procedures. I cleaned up databases in Excel and used Python before loading them into database tables. I also provided user training and developed manuals and flowcharts for the developed processes.
Software Tools	Linux, Windows, Odoo, Postresql, Leguaje Python, Javascript, XML, Vmware
Achievements	Implementation of Odoo in virtual machines, database backups.
Contact	Fernando Ascencio phone: +52 33 3620 3782 email: ventas@dinetsys.com.mx
Reason of exit	Change of job to improve skills and work abilities

Professional Education

Career	Administrative Information Technology
Institution	UNIVERSIDAD DE NEGOCIOS ISEC
City	México City
Start and end years	2001 a 2005

Courses and Diplomas

Course name	Certificate YES / NO.
Automated ML Apple & Google	YES
Administración de Base de Datos Oracle	YES
Oracle Certified Foundation Associate	YES
Scrum Fundamentals for Scrum Master and Agile Projects	YES
Escuela Ciencia de Datos UNAM	YES
Coursera Learner Proceso de datos Sucios a Datos limpios	YES
Statistics for Business Analytics using MS Excel	YES

Idioms

Idioms	1. English	2.Spanish	3.	4.	5.

Technical knowledge

Frontend programming languages	Years	Level
Javascript, Django, Html	2	Advanced
	Years	Level
Oracle Cloud, Amazon RDS, Azure	6	Advanced
Tools / Frameworks	Years	Level
AutoML, Create ML	1	Advanced
Environments / Mobile environments	Years	Level
Odoo ERP versions 6 a 13,	1	Advanced
Operating systems	Years	Level
Windows, Linux, OSX, UNIX	10	Advanced
Bases de Datos	Años de uso	Level
Oracle, MS Sql Server, Postgresql, Databricks, Snowflake	6	Advanced
Metodologías	Años de uso	Level
ITIL, AGILE, SCRUM	6	Advanced

Core Skills

- Proven skills with SQL, Python, Java and related frameworks.
- Experience in data science or data engineering
- Databases: advanced handling of SQL and NoSQL databases (PostgreSQL, MongoDB, Redis)
- Machine Learning Ops (MLOps)
- Mastery of TensorFlow, PyTorch, and Scikitlearn
- Machine learning tools and frameworks
- Processing large volumes of data. Hands-on experience with Spark and Pandas for ETL and analytics
- Use of tools such as Power BI, Tableau and AI tools.
- Microservices development and Microservices integration using Python and Docker Kubernetes containers
- Time series and statistical modeling
- Knowledge of Kafka and its integration with data flows
- Architecture and data modeling skills required to ship products using industry-standard data and cloud technologies AWS Glue, Apache Airflow, Databricks, and Azure Data Factory.
- Snowflake Administration (RBAC, Warehouses, Cost Control, Security)
- SQL Performance Tuning & Query Optimization dbt (models, tests, transformations)
- ELT & Data Pipelines
- Data Warehousing & Data Modeling
- Python (automation, scripting, Snowflake integration)
- Cloud Platforms (AWS, Azure, OCI, GCP)
- Oracle, PostgreSQL, SQL Server
- Power BI, Databricks
- DevOps & Automation
